

FS34108

FLADDERMUS | RESCUE STRETCHER

2017/745 CLASS 1 MD

The FS34108 - FLADDERMUS is a robust, compact and lightweight rescue stretcher, composed of four straps to accommodate the victim and two handles on each side for transport. The stretcher has three anchoring points on each side, one point over the head and another under the victim's feet. It also has two back-up points located in the shoulder area. All these points ensure greater safety for the victim and allow the rescue stretcher to be handled horizontally, vertically, or at any angle in between. No webbing passes under the stretcher preventing damage whilst dragging. It's very easy to clean, disinfect and maintain due to its simple design. In addition, all components are customizable and replaceable.

SIZE - EAN CODE	500x300x2000mm (open) 300x920mm (wrapped) EAN: 5605423808278	SPECIFICATIONS
INTENSITY OF USE	N/A	-High visibility PES webbing -Compact - can be wrapped -Maximum load - 140 kg -PES carrying bag -Feet support -4 adjustable points -4 carrying points -8 lift points -PE-HD body -Unisize
