

HARNESS FOR BOVINES AND EQUINES

Special harness developed for lifting and heli-transport operations of bovines and equines in emergency situations; it can be used for similar size animals.

Transportable weight between 300kg and 600kg.

It is made of polyester HT heavy load and low stretching; it weights only 3 kg.

Before using the harness it's important to make a training with a dummie in a safe place.

A wrong use of the harness could cause the loss of the animal.

During transport operations bendage the animal and ask the support of a veterinarian.

If the animal is nervous or shocked, use a sedative.

Due to the altitude shock, the animal could try to struggle; always check the buckles before starting the lifting manoeuvres.

The lifting time depends on the animal but it never must exceed 15 minutes; an higher period could be cause of choke or injght at internal organs.

High quality product, completely developed and made in Italy.
